

## Featured Project

### Market and Yuba Streets Streetscape Modernization

Redding, California

The City of Redding is nestled in the midst of some of the West's most beautiful natural recreation areas. It is also the regional center of Northern California—the seat of health, legal and social services, retail, and employment.

The City's challenge is to balance the need for growth with the historic and natural beauty intrinsic to the area. The goal of this downtown revitalization project was to modernize the streetscapes to reflect current and future needs, while maintaining a "small-town" atmosphere.

ArcSine provided the following services:

- Two streetscape projects, each consisting of two City blocks.
- Sidewalks were widened to 10 feet on each side of the street with illuminated bollards, planter landscape lighting, and decorative street lighting.
- Power provisions were designed into planter areas for City of Redding sponsored block parties, which consists of closing two City blocks for vendor booths and special venues.
- Coordinated the relocation of above-ground utilities to below grade.
- Provided services during construction.
